EXECUTIVE SUMMARY

Overview

PROJECT BACKGROUND

This project analyzes OCA Blast's active user behavior by segmenting 20 business clients using a rule-based Trend-Volume (T-V) scoring framework to identify churn risk and upsell opportunities across 4 messaging channels.

OBJECTIVE

Segment OCA's 20 users by behavior patterns using T-V scoring to identify churn risk and upsell opportunities, enabling targeted account management actions.

KEY FINDINGS

- ✓ All 20 users are active every day (90/90 days) — engagement is not the problem
- ✗ 18 of 20 users (90%) showed 25–32% volume decline Jan→Mar 2025
- ✗ 3 anchor users represent 59.9% of platform revenue — all declining
- Decline is uniform across industries, suggesting seasonality rather than platform issues

TOOLS & METRICS

Tools
Python, Google Sheets, Tableau

Key Metrics
Trend Score (T), Volume Score (V),
Transaction Volume, Revenue Share, Active
Days, Channel Mix

RECOMMENDATIONS

- P0 Protect 3 anchor users (59.9% revenue) — personal AM calls within 24 hours
- P1 Stabilize 5 significant users (25.1% revenue) — AM review within 1 week
- P2 Recover 10 emerging users (12.5% revenue) — automated check-in + onboarding resources
- P3 Watch 2 resilient users (2.5% revenue) — low-touch maintenance + product updates

BUSINESS BACKGROUND

What is OCA Blast?

CPaaS Platform

Communication Platform-as-a-Service owned by Telkom Indonesia, enabling businesses to send messages at scale.

Multi-Channel

4 messaging channels: WhatsApp, SMS, Email, and Voice Call (IVR).

WhatsApp

SMS

Email

Voice Call

Platform Scale

20 business clients across 9 industries.

20

Users

122K+

Transactions

9

Industries

Data Period

Q1 2025 (January — March). 3 months of multi-channel transaction data.

BUSINESS PROBLEM

Why This Analysis Matters

"Segment OCA's 20 users by behavior patterns using T-V scoring to identify churn risk and upsell opportunities, enabling targeted account management actions."

Revenue Concentration

3 users = 59.9% of platform revenue. All 3 declining.

No Action Framework

Without segmentation, Account Managers cannot prioritize outreach.

ANALYSIS OBJECTIVES

What This Analysis Supports

Churn Detection

Identify which users are declining and how much revenue is at stake

Anchor Protection

Protect high-volume users representing critical platform revenue

Upsell Opportunities

Find stable or growing users with headroom to expand usage

Targeted Action

Give Account Managers a clear prioritization framework for outreach

ROOT CAUSE ANALYSIS

Why Are Users Declining?

Guideline for This Project

This analysis uses the T-V (Trend-Volume) scoring framework to segment users into actionable groups. The root causes identified above inform the prioritization: seasonality-driven declines should not trigger immediate escalation — focus retention efforts on anchor users where revenue impact is highest.

DATASET SCOPE

Data Overview

Transaction Volume by Channel

User Profile

Total Users	20 companies
Industries	9 sectors
Active Days	90 / 90
Channel Mix	All multi-channel

Key Finding: All 20 users are active every single day (90/90). Volume is declining but engagement is not.

METHODOLOGY

The T-V Scoring Framework

T

Trend Score

Is monthly usage growing, stable, or declining?

Segment Definitions

Anchor at Risk

T=1 (Declining) V=3 (High)

Highest-volume users whose usage is declining. These are your most valuable customers — losing them would significantly impact platform revenue.

3 users · 59.9% revenue

Significant at Risk

T=1 (Declining) V=2 (Mid)

Mid-volume users with declining usage. Important revenue contributors that need attention before they shrink further.

5 users · 25.1% revenue

Emerging at Risk

T=1 (Declining) V=1 (Low)

Low-volume users with declining usage. The largest group by count, but smallest revenue impact. May need onboarding support.

10 users · 12.5% revenue

Resilient

T=2 (Stable) V=1 (Low)

Low-volume users who maintained steady usage despite the overall decline trend. They are consistent but have room to grow.

2 users · 2.5% revenue

Steady

T=2 (Stable) V=2-3 (Mid-High)

Mid-to-high volume users with stable usage. No users fell into this category in Q1 2025.

0 users · 0% revenue

Rising / Momentum

T=3 (Growing) Any

Users with increasing usage over consecutive months. No users showed growth in Q1 2025 — the overall trend was decline.

0 users · 0% revenue

SEGMENTATION RESULTS

Q1 2025 Segment Distribution

Declining (T=1) — 18 users

Anchor at Risk

V=3 · 3 users · 59.9% revenue

Significant at Risk

V=2 · 5 users · 25.1% revenue

Emerging at Risk

V=1 · 10 users · 12.5% revenue

Stable (T=2) — 2 users

Steady

V≥2 · 0 users

Resilient

V=1 · 2 users · 2.5% revenue

Growing (T=3) — 0 users

Rising

V≥2 · 0 users

Momentum

V=1 · 0 users

💡 **Key Insight:** 3 anchor users represent 59.9% of platform revenue. All declining. Revenue concentration is an independent business risk.

CRITICAL FINDING

Anchor Users at Risk

USER	INDUSTRY	AVG DAILY	DECLINE	REVENUE	SEASONAL
CV Wisata Indo	Travel	282.2	-25.3%	20.1%	Yes
PT Dana Nusantara	Finance	281.2	-29.7%	20.0%	No
CV Land Sejahtera	Real Estate	279.3	-26.2%	19.8%	No

Priority: Protect

AM personal call within 24 hours. Escalate if no response in 48h.

Decline Pattern

25–30% decline across all 3. Uniform pattern suggests shared external cause.

Revenue Impact

Combined 59.9% of platform revenue. Single churn = visible quarterly impact.

INSIGHTS

Key Findings (click to expand)

- ✓

01

Platform Stickiness is Real

▼

All 20 users active every day for 90 consecutive days. Volume declining but engagement is not.
- 📊

02

January Was the Peak

▼

Every single user peaked in January. Post-New Year + pre-Ramadan seasonality likely driver.
- 🌟

03

Two Users Bucked the Trend

▼

CV Jalan Mandiri (Steady) and PT Edu Mandiri (Resilient) held volume while 18 others declined.
- 🔍

04

Decline is Nearly Uniform

▼

15 of 18 declining users fell 25–32%. Uniform rates suggest shared external cause.
- 📉

05

Decline is Nearly Universal

▼

18 of 20 users (90%) showed declining volume Jan→Mar 2025. Decline rates cluster tightly at 25–32%.

RECOMMENDATIONS

Action Plan by Segment (click to expand)

Protect

Anchor at Risk · 3 users (59.9% revenue)
AM personal call within 24h. Identify root cause. Offer contractual incentives.

stabiliz

Significant at Risk · 5 users (25.1% revenue)
AM review within 1 week. Check seasonality flag before escalating urgency.

Recove

Emerging at Risk · 10 users (12.5% revenue)
Automated check-in. Offer onboarding resources. Investigate group patterns.

Watch

Resilient · 2 users (2.5% revenue)
Low-touch maintenance. Share product updates. Offer product walkthrough.
